

Brief Summary of Control Book

This book was compiled from existing reports and surveys provided by Geometrics, GPS, Inc., and Richland County Aerial Photos from 1995. The data contained herein is believed to be an accurate representation of the results of GPS surveys and adjustments performed for Richland County. Only the permanent or semi-permanent monuments (concrete monuments, steel rods with brass disks, iron pins, railroad spikes) were included in this book. Periodic updates may be available regarding corrections to published data or comments regarding the condition of the monuments. Please report any monuments that are found disturbed or obliterated to the Richland County Engineer (419-774-5591)
